PROFESSIONAL SUMMARY

Senior Data Analyst with **8+ years** of international experience across food & groceries delivery and energy, currently **leading a team of three at Careem** and driving **\$3M in annual cost-margin savings**. Defined the org-wide North Star Metric for Careem Food, founded the company's experimentation standards and review board, and partnered with engineering to standardize core metrics into governed data marts. Combines hands-on depth in SQL, Python, ML, and experimentation with a track record of shaping product and business decisions through data, **scaling self-serve analytics**, and **mentoring analytics teams**.

TECH STACK

- **Languages, Querying & Modeling:** SQL, Python, dbt, Cube.dev
- **BI & Visualization:** Power BI, Tableau, Apache Superset, Redash, Qlik Sense
- **Experimentation, ML & Analysis:** Galileo, A/B Testing, scikit-learn, pandas, NumPy

WORK EXPERIENCE

Senior Product Analyst-II | Careem (Uber, e&) | Riyadh, KSA

Aug 2024 – Present

- Promoted to lead a team of three analysts owning Logistics Operations and ETA for Food & Groceries across MENA, delivering **\$3M** in annual cost-margin savings
 - Scaled pooling and multi-modality fleet strategies by defining analytics-driven constraints, optimizing order selection to reduce cost per order with minimal trade-offs
 - Built a gradient-boosted decision tree classifier to predict the number of riders required for large orders, enabling automatic multi-rider assignment — reduced large-order delivery time by **20%**
 - Optimized ETA models to be more adaptive to supply stress, basket size, and longer distances, reducing delays by **2pp (3pp)** during peak hours)
 - Reduced rider wait time at restaurants by **40%** through optimization of rider dispatch, restaurant arrival visibility, and deployment of Bluetooth beacons to streamline food handover
- Defined the Marketplace Health Index to quantify supply stress, and designed a 4-tier graceful-degradation response framework (ETA transparency → pooling → dynamic delivery radius → shutdown) with statistically validated, zone-level thresholds
 - Achieved **10×** reduction in app shutdown and a **2pp** conversion uplift
 - Designed real-time dashboards and alerts to monitor demand and supply changes, supply utilization, and customers impacted by demand reshaping — saving **40K** man-hours annually
- Defined the North Star Metric for Food delivery reliability — adopted org-wide as the single measure every team's roadmap aligns to — using statistical sensitivity analysis to rank and attribute input levers to their owning teams
- Pioneered self-serve analytics, cutting time-to-insight from days to hours
 - Developed a Food Delay attribution agent translating natural language into SQL with automated root cause analysis and deep dives, enabling self-serve analytics for partner teams
 - Contributed to Careem's GenAI Champions Group through training, hackathons, and practical initiatives — including ML-assisted query generation that reduced SQL coding effort by **70%** and document-intelligence GPTs to accelerate research and framework creation
- Partnered with Data Engineering to standardize core KPI definitions across Food & Groceries, building governed data marts on dbt and Cube.dev — establishing a single source of truth that eliminated metric discrepancies across dashboards and teams
- Designed, implemented, and analyzed **25+** experiments across rider dispatch, supply stress, and ETA optimization
- Own the team's analytics roadmap and quarterly prioritization, partnering with Product, Data Science, and Operations leadership to align analytics investment with business OKRs
- Mentor eight data analysts across pay, fraud & risk, new ventures, supply operations, and customer growth, enhancing their technical and analytical skills
- Led the Food & Groceries analytics review forum, presenting analytics-driven initiatives and business impact to C-suite and senior leadership at company-wide forums

Senior Product Analyst-I | Careem (Uber, e&) | Dubai / Remote

Jun 2022 – Jul 2024

- Founder & Chair of the Experiment Review Board (est. Oct 2023), standardizing experiment design and analysis across Careem by leading regular cross-functional reviews with product and data science, ensuring high-quality experimentation and decision-making

- Led the analytics of Food ETA, enabling success of the 'Dirham for Delays' campaign
 - Conducted statistical analysis to optimize food prep and last-mile models, yielding **+30pp** YoY on-time deliveries and reducing delays to under **10%**
 - Developed heuristic model to add ETA buffers during supply stress, reducing delays by **2pp**
 - Built real-time delayed order tracking, reducing response time from 24 hours to under 15 minutes
- Developed delayed orders attribution framework identifying the responsible actor for each delayed order — implementation of recommended actions increased ETA adherence by **3pp**
- Conducted statistical analysis on every leg of the delivery journey to identify levers for faster fulfilment; recommended initiatives improved orders delivered within 35 minutes by **+5pp**
- Developed heuristics model for Groceries ETA including store picking/packing, rider arrival at store, and last-mile predictions — achieving **31%** YoY improvement in on-time deliveries
- Designed and analyzed a large-scale experiment replacing Google ETAs with Careem's in-house ETA engine, impacting **50M+** users across the platform

Governance Data Analyst – Smart Grid | K-Electric | Karachi, Pakistan Nov 2019 – Jun 2022

- Implemented governance frameworks to identify business and operational KPIs, develop SOPs, and build reporting mechanisms ensuring over **90%** compliance of processes and TATs
- Developed governance dashboards to monitor Smart Meter coverage, communication, and faults — providing actionable data insights to business centers and saving **\$1.2M** annually
- Ensured synchronization and data integrity of smart meter records across SAP, MDMS & Head-end servers, enabling auto-billing of over **95%** of consumers and saving **36K** man-hours annually; ensured effective SIM governance saving **\$200K** annually

Operations Data Analyst | Sapphire Wind Power Company Limited | Karachi, Pakistan Feb 2018 – Nov 2019

- Developed framework for predictive analytics of wind turbine gearbox faults, saving **\$1M** annually
- Developed dashboards on Siemens SIMATIC WINCC for monitoring turbine gearbox, generator, and controller, saving **\$375K** annually
- Developed power curtailment and outage simulator to identify severely impacted transmission lines; multiple initiatives in coordination with government authorities reduced outages and saved **\$2.4M** annually

EDUCATION

Karachi School of Business and Leadership (KSBL), Pakistan Feb 2022 – Sep 2023

Master of Business Analytics

National University of Sciences and Technology (NUST), Pakistan Sep 2013 – Jun 2017

Bachelor of Electrical Engineering | CGPA: 3.57

- Presented research paper ("[Experimental Performance Analysis of Network Coding in Wireless Systems](#)") at IEEE 87th Vehicular Technology Conference (VTC Spring), Porto, 2018
