

ATIF SALMAN SHEIKH

+966 57 703 6962 • atif.mansal@gmail.com • [Linked In](#) • Riyadh, Saudi Arabia

Senior Product Analyst with **8+ years** of international experience across food & groceries delivery and energy, currently **leading a team of three at Careem** and driving **\$3M in annual cost-margin savings**. Defined the org-wide North Star Metric for Careem Food, founded the company's experimentation standards and review board, and partnered with engineering to standardize core metrics into governed data marts. Combines hands-on depth in SQL, Python, ML, and experimentation with a track record of shaping product and business decisions through data, scaling self-serve analytics, and mentoring analytics teams.

TECH STACK

Languages, Querying & Modeling: SQL, Python, dbt, Cube.dev
BI & Visualization: Power BI, Tableau, Apache Superset, Redash, Qlik Sense
Experimentation, ML & Analysis: Galileo, A/B Testing, scikit-learn, pandas, NumPy

WORK EXPERIENCE

Senior Product Analyst-II Aug 2024 – Present
Careem (Uber, e&) · Riyadh, KSA

- Promoted to lead a team of three analysts owning Logistics Operations and ETA for Food & Groceries across MENA, delivering **\$3M** in annual cost-margin savings
- Defined the **Marketplace Health Index** to quantify supply stress, and designed a 4-tier graceful-degradation response framework (ETA transparency → pooling → dynamic delivery radius → shutdown) with statistically validated, zone-level thresholds — achieving **10x** reduction in app shutdowns and a **2pp** conversion uplift
- Defined the **North Star Metric** for Food delivery reliability — adopted org-wide as the single measure every team's roadmap aligns to — using statistical sensitivity analysis to rank and attribute input levers to owning teams
- Optimized ETA models to be more adaptive to supply stress, basket size, and distance, reducing delays by **2pp** (**3pp** during peak hours); reduced rider wait at restaurants by **40%** via dispatch optimization and Bluetooth-beacon handover
- Built a gradient-boosted classifier predicting riders required for large orders, enabling automatic multi-rider assignment — cut large-order delivery time by **20%**
- Developed a Food Delay attribution AI agent translating natural language into SQL with automated root-cause analysis; pioneered self-serve analytics, cutting time-to-insight from days to hours
- Contributed to Careem's GenAI Champions Group — ML-assisted query generation reduced SQL effort by **70%**; partnered with Data Engineering on governed dbt/Cube.dev data marts as a single source of truth
- Designed real-time demand/supply dashboards and alerts, saving **40K** man-hours annually; designed and analyzed **25+** experiments across dispatch, supply stress, and ETA
- Own the team's analytics roadmap and quarterly prioritization with Product, Data Science, and Ops leadership; mentor eight analysts; present business impact to C-suite at company-wide forums

Senior Product Analyst-I Jun 2022 – Jul 2024
Careem (Uber, e&) · Dubai / Remote

- **Founder & Chair of the Experiment Review Board** (est. Oct 2023), standardizing experiment design and analysis across Careem via regular cross-functional reviews with product and data science
- Developed a delayed-orders attribution framework identifying the responsible actor for each delayed order — recommended actions increased ETA adherence by **3pp**
- Analyzed every leg of the delivery journey to find fulfilment levers; recommended initiatives improved orders delivered within 35 minutes by **+5pp**, and yielded **+30pp** YoY on-time deliveries
- Designed and analyzed a large-scale experiment replacing Google ETAs with Careem's in-house ETA engine, impacting **50M+** users; built real-time delayed-order tracking, cutting response time from 24h to under 15 min
- Developed heuristic Groceries ETA model (store picking/packing, rider arrival, last-mile) — **31%** YoY improvement in on-time deliveries

Governance Data Analyst – Smart Grid Nov 2019 – Jun 2022
K-Electric · Karachi, Pakistan

- Built governance frameworks and dashboards for Smart Meter coverage, communication, and faults — over **90%** process compliance, saving **\$1.2M** annually
- Ensured smart-meter data integrity across SAP, MDMS & Head-end servers, enabling auto-billing of **95%+** of consumers and saving **36K** man-hours annually

Operations Data Analyst Feb 2018 – Nov 2019
Sapphire Wind Power Company · Karachi, Pakistan

- Built predictive-analytics framework for wind-turbine gearbox faults, saving **\$1M** annually; developed SCADA monitoring dashboards saving **\$375K**
- Built a power-curtailment/outage simulator; initiatives with government authorities reduced outages, saving **\$2.4M** annually

EDUCATION

Karachi School of Business & Leadership (KSBL) — Master of Business Analytics Feb 2022 – Sep 2023
National University of Sciences & Technology (NUST) — BE Electrical Engineering (CGPA 3.57) Sep 2013 – Jun 2017
Presented "Experimental Performance Analysis of Network Coding in Wireless Systems" at IEEE 87th Vehicular Technology Conference (VTC Spring), Porto, 2018
